

Helping you meet the City of San Antonio Code Requirement – Air Barriers

June 15th, 2016
San Antonio, Texas
Full Day Event

Meet Our Industry Experts

Roy Schaufele, FCSI, CCPR, LEED GA, FAABA
President, Division 7 Solutions, Inc., ABAA Member, Immediate Past Chairman

Ryan Dalglish, CSI
Chief Operating Officer, ABAA

Tom Kita, CSI, CDT
BD Hatchman / Primero Engineering
ABAA Member, Licensed Air Barrier Auditor

Brian Stroik
Manager—Building Envelope Solutions Team, Tremco
ABAA Member, 1st Vice-Chairman

Craig Wetmore, CSI, CDT
President, York Manufacturing Inc.,
ABAA Member, Voice Committee Chair

San Antonio is the first city in Texas to adopt the 2015 version of the International Energy Conservation Code (IECC).

The 2015 IECC has continuous air barrier requirements and this code change impacts design, construction and sequencing of the trades to ensure a functional and effective air barrier system

Five leading experts from North America will be presenting during this educational event to help individuals understand these code requirements and prepare individuals to design and construct more energy efficient buildings. The presentations will focus around:

- What are the IECC air barrier code requirements?
- Current material test standards and code compliance options
- How to specify an air barrier
- Design considerations and introduction to material choices
- How other wall components integrate with the air barrier for moisture management
- Helping to identify key installation requirements for a variety of air barriers
- Field inspection and site observation processes and items to look for on a job site
- Top construction issues from a general contractors perspective
- Understand ABAA's quality assurance program for improving installation

Field mock-up's, panel discussions and question and answer periods will fill out the day.
